

18th March, 2022, (Paris/Geneva/Prague CET time zone)
hybrid event

THE HERA FINAL CONFERENCE

Research for the Green Deal
La Recherche pour le Pacte vert

HERA is a European H2020 project coordinated by Inserm and co-coordinated by ISGlobal; its objective is to propose a research agenda in environment, climate and health for the next 10 to 15 years. HERA will present its proposals at the end of 2021 and will disseminate them in early 2022. We are dedicating a day to the presentation of the research agenda under the patronage of the French Presidency of Europe the 18th of March, 2022.

The presentations will focus on: research to support the Green Deal implementation; climate change and health; urban and rural areas; research and expertise on the impact of chemicals; environment and pandemics; environmental burden of disease; mechanisms of societal and economic transformation. The event will be set up as few large conferences in which there will be room for interactivity.

The French presidency will embody the research effort to meet the challenges of the Green Deal and the presentation of the research agenda of the HERA program perfectly meets this objective. This will support European leadership in this field and in particular in research and international expertise on chemicals, climate change, urbanization and the environment-pandemic relationship.

ORGANIZING COMMITTEE: The HERA Executive Committee

SCIENTIFIC COMMITTEE: The International Scientific Committee of HERA

SPEAKERS: see agenda below. Opening and closing sessions will be in French.
